The Learning Policy Institute (LPI) released its first impact report 3 years ago, in spring 2020, soon after the COVID-19 pandemic hit the country. Even in those first few months, it was strikingly clear that the pandemic was affecting communities differently based on deep inequalities in income, access to health care and services, and digital connectivity. At the posting of this impact report, which covers our work since that time, the pandemic has proven to be more devastating than anyone could have imagined in the beginning: Hundreds of thousands of students have lost their primary caregivers, economic stability is even more elusive for many, and millions of children are struggling with both academic losses and mental health challenges.

Combine the pandemic's destruction with the ongoing threat of school shootings, climate-related environmental disasters, pervasive racism, and social and political contention, and it is clear that our country's children and youth carry an unprecedented burden of trauma and stress. As policymakers and educators are faced with the daunting issue of addressing student physical safety, mental well-being, and learning recovery, one thing is especially clear: Returning to business as usual in education is not an option.

Right now, we have a historic opportunity—a responsibility, even—to reinvent and redesign schools to better serve students, educators, and families, now and in the future. For the past 2 years, LPI has intensified our research on how to fund and organize schools and teaching in ways that enable all students to learn and thrive. We are working with hundreds of partners and policymakers across the country to reimagine traditional structures and practices; to rethink the way in which schools are organized around time, physical space, educator expertise, curriculum, and instruction; and to redesign schools around principles of equitable resources and access, culturally responsive teaching and authentic learning, stronger relationships, and wraparound supports for children and families.

This impact report reflects LPI's efforts to inform practice and policy so that they enable powerful new approaches to education that are grounded in our growing knowledge of human development, learning, and effective teaching. The work documented in these pages aims to develop models supporting equitable and empowering learning for every child that will carry them—and our society—through the next century.

Who We Are

A knowledgeable and passionate team committed to creating empowering and equitable education for each and every child

Since 2015, the Learning Policy Institute (LPI) has conducted and communicated independent, high-quality research to improve education policy and practice.

Our staff of 60 includes researchers, policy experts, communicators, and operations staff with diverse backgrounds and experience, from education practice to law and policy, as well as a wide range of research disciplines. We maintain robust internship and postdoctoral researcher programs to support the next generation of education research and policy leaders. Our board of directors is made up of distinguished leaders in education, civil rights, business, and philanthropy, and our more than 60 senior research fellows represent leading universities and research organizations across the United States and abroad.

Nonprofit and Nonpartisan
LPI connects policymakers and stakeholders at the local, state, and federal levels with the evidence, ideas, and actions needed to strengthen the education system from preschool through college and career readiness.

Collaborative
Working with policymakers, researchers, educators, community groups, and others, LPI advances evidence-based policies that prepare young people to enter and contribute to the complex world as thoughtful collaborators and problem solvers.

Driven by Equity
In a country of persistent opportunity and achievement gaps, LPI is committed to creating systems that support equitable and empowering education for each and every child.
LPI’s work is tremendously valuable. You are deep into the policies, yet you boil down the essentials for easy reading. Particularly for state folks who are working on many issues, that easy entry into complex arenas is vital.

— Lauren Jacobs, Partnership for the Future of Learning

What We Do

Connecting policies and practices to high-quality research

Every child has the potential to thrive and develop the skills they need to succeed in college, career, and life—including problem-solving, critical thinking, creativity, collaboration, and communication. To accomplish this goal, our education systems need to focus on the evidence-based policies and practices that contribute to learning that is meaningful, equitable, and empowering. Yet, too often high-quality research goes unnoticed by the leaders who can put its lessons into practice.

We address this problem by marshaling independent, actionable research to inform effective approaches to the country’s pressing educational needs. To this end, we commission, support, synthesize, and conduct original research and policy analyses on a variety of critical topics in education.

Our work does not stop at the research. We translate findings into clear, policy-relevant materials that are accessible to many audiences. We bring evidence to bear at the local, state, and federal levels, responding to the needs and questions of policymakers and government organizations. And we make research available to all those working to build a stronger education system, partnering with policymakers, educators, civil rights groups, and community organizations to help develop and advance evidence-based educational policies and practices.
Ensuring Quality Preschool for All
Giving all young children a strong start for healthy development and academic success

High-quality early learning provides long-term benefits for young children, including higher academic achievement and lower risks of being placed in special education or held back in elementary school. These benefits are especially strong for children who are from low-income households and for dual language learners. Since nearly half of the country’s preschool-age children live at or near the poverty level, high-quality early education has the potential to reduce the achievement gap substantially. LPI’s research has supported major expansions and investments in high-quality child care and preschool for all California early learners and set the stage for significant reform at the national level.

Translating Effective Practices Across States
In 2021, California made major investments to advance early childhood education, extending state funding for transitional kindergarten (TK) to ensure all 4-year-olds have access by 2025–26. LPI has supported this expansion with research on state strategies across the nation that have informed California’s plans, including early childhood essential skills and competencies, recommendations for assessment practices, studies of mixed delivery systems for services to children, and promising practices for early educator teacher preparation.

Analyzing Needs and Identifying Solutions
Scaling up a new grade level for young learners brings substantial demand for large numbers of new staff with new competencies. LPI studies of early childhood teacher credentialing in other states informed the P–3 credential adopted in 2023 by the California Commission on Teacher Credentialing. In addition, LPI’s analyses of workforce needs and pathways into

11,900

Estimated minimum number of additional lead teachers needed for transitional kindergarten in California by 2025.

the profession have quantified the demand; identified potential sources of supply; and articulated strategies that can support the adequacy, stability, and diversity (racial, ethnic, cultural, and linguistic) of the early childhood education workforce. To create a shared vision for how to support new pipelines and programs to provide the thousands of new teachers needed for TK, LPI has organized convenings for hundreds of California early educator preparation program faculty and school leaders.

Informing Policy
The 2022–23 California state budget reflects high-leverage early learning priorities surfaced in LPI research, including funding for TK–12 workforce development programs, such as teacher residencies and high school pathways that prioritize early childhood education; expedited pathways for experienced preschool teachers, who are predominantly women of color, to teach TK with supports en route to the new P–3 credential; and better collection of TK data.

Change happens at the speed of trust. Universal PreK is exciting, it’s important, and it’s disruptive. ... Building relationships and trust over time is essential to the successful rollout of universal PreK.

— Barbara Chow, Education Program Director, Heising-Simons Foundation, speaking at LPI's webinar, Improving Access to High-Quality Preschool: Lessons from Five State Mixed Delivery Systems

AERA symposium panel on California universal prekindergarten, with panelists Assemblymember Kevin McCarty, LPI Senior Fellow Rucker Johnson, Deputy Superintendent of California Department of Education Sarah Neville-Morgan, LPI’s Hanna Melnick, and LPI Senior Fellow Deborah Stipek.
The COVID-19 pandemic upended schools and exposed deep and widening inequities within the U.S. society and education system. Early on in the crisis, LPI quickly emerged as a leading source for policymakers and administrators, publishing one of the first guides for addressing school health and safety based on best practices from other countries. LPI’s work on safe schools has been widely used by the Centers for Disease Control and Prevention and the U.S. Department of Education, which cited LPI in its guidance for safely reopening schools and invited LPI to cohost a National Safe School Reopening Summit.

Reimagining Schools Across the World
The disruption of COVID-19 underscored the enormous importance of schools, as they delivered food, computers, hot spots, and vaccines throughout their communities. It also sparked innovation around the possibilities for reinventing schools to better support and prepare students for a fast-changing world. LPI’s framework for restarting and reinventing schools provides a road map to develop equitable, effective teaching and learning and has become a central tool for policymakers, school boards, and education leaders throughout the United States and across the world. Among more than 20 countries using the framework, the Chilean organization Tu Clase Tu País translated it into Spanish and partnered with UNESCO to hold seminars with government officials and education leaders in Argentina, Ecuador, Mexico, and other countries to inform their policymaking.

Restarting and Reinventing Schools
Reinventing school for equity and meaningful learning

Supporting Mental Health and Learning Recovery
In the aftermath of the crisis and beyond, LPI is helping state and district leaders address the pressing issues of student mental health,
This is the blueprint laying out the foundation for the changes we need to make the system we need.

— New Jersey State Leader, on LPI’s Restarting and Reinventing framework

producing resources to support social and emotional health and well-being, identity-safe schools, and restorative practices. LPI has also taken a lead on supporting research and resources for learning recovery, hosting a popular webinar series on accelerating learning in collaboration with AASA, the School Superintendents Association.

Our work translating the science of learning and development into design principles for schools has been influential in setting a new vision for student learning and the reinvention of U.S. schools. It was cited in the White House’s action plan for building better school infrastructures and the U.S. Surgeon General’s advisory on protecting youth mental health.

A Framework for Restarting and Reinventing School

Enabling Whole Child Education
Nurturing children’s social, emotional, cognitive, and academic development

New insights from neuroscience and the science of learning and development (SoLD) make it clear that many of the assumptions underlying the factory model schools we inherited are false. Genes do not determine intelligence, students do not learn in standardized ways, and mechanized procedures do not optimize growth. Instead of maintaining outdated education systems designed to select and sort students as they move along an assembly line, we can use this knowledge of how contexts and experiences support development to design schools centered on rich and meaningful learning opportunities, safety and belonging, and positive relationships to help every student learn and thrive.

Translating the Science of Learning Into Practice
LPI has been on the forefront, with colleagues, of defining this SoLD knowledge base and translating it into design principles for schools and for educator preparation programs. Created in collaboration with the SoLD Alliance, Turnaround for Children, and the Forum for Youth Investment, our comprehensive playbook of design principles for K–12 education has become a guiding framework for leaders and practitioners across the country. In the hands of our many partners in the field, these principles have the potential to shift schooling to focus on the whole child in ways that can dramatically improve outcomes for children. From New York City to San Francisco, LPI has documented the stunning successes of schools designed around these principles in serving students who are traditionally marginalized. We have worked with a wide range of partners to support the use of these principles in districts and states; for example, partnering with AASA, the School Superintendents Association, to incorporate them in a professional learning network of more than 120 school systems enacting holistic school redesign.

Views of “Implications for Educational Practice of the Science of Learning and Development,” the foundational article by LPI authors on the science of learning, as of June 27, 2023.

Supporting Whole Child Policy

Working with research and policy institutions and state policymakers through the Whole Child Policy Table, LPI has also supported states from California to South Carolina as they develop and implement policies to meet the needs of the whole child. Resources like a Whole Child Policy Toolkit and related webinar series help make research and policy examples accessible for policy audiences. At the federal level, LPI has shared research on approaches that work—ranging from social and emotional learning and restorative practices to integrated student supports (health and social services), expanded learning time, and community schools—through briefings and testimony, as well as assistance to legislators crafting policies that expanded investments for these initiatives.

LPI also worked with partners to inform the 2022 Bipartisan Safer Communities Act, legislation that was designed to respond to school shootings that included $1 billion for these supports as well as $500 million to increase the number of counselors, psychologists, social workers, and other mental health professionals in schools.

Transforming Education Through Community Schools
Connecting communities, students, and families for a holistic approach to learning

The United States has the highest rates of child poverty, homelessness, and food insecurity in the industrialized world, conditions that can undermine every aspect of child development and learning. To meet the needs of students facing barriers to learning, policymakers are increasingly investing in community schools, a strategy in which schools emphasize integrated systems of support for health care and social services, student and family engagement, collaborative leadership, expanded learning, community-connected instruction, and a culture of care.

Leading Research on Community Schools
Early LPI work documented the effectiveness of community schools, reviewing more than 140 studies that evaluated outcomes associated with their design features. These findings informed significant state policy development, including a statewide community schools initiative in New Mexico and a $4.1 billion investment in the California Community Schools Partnership Program. LPI’s research highlights how leading states and districts support community schools, documenting exemplars at the school level, so

“The Learning Policy Institute has been at the center of promoting the concept [of community schools], especially as the U.S. Department of Education prepared this fall to receive grant applications for ... the largest-ever funding for community schooling.”

— Jay P. Goldman, Editor, *School Administrator* (AASA)
that others can learn best practices for high-quality implementation.

**Informing Federal Policy and Investments**
At the federal level, LPI research informed a doubling of the federal investment in community schools in the fiscal year 2023 budget, along with a redesign of the program to incorporate lessons from the field. The White House cited LPI’s research in its toolkit on community schools, and the U.S. Department of Education partnered with LPI on its professional learning series focused on how community schools can be effectively implemented and how federal relief funds can be used to support them.

**Collaborating to Expand and Scale Community Schools**
More recently, as part of a Community Schools Forward task force—a partnership with the Center for Universal Education at the Brookings Institution, the Children’s Aid National Center for Community Schools, and the Coalition for Community Schools at the Institute for Educational Leadership—LPI developed core community school concepts and frameworks to support adoption and implementation, as well as an interactive costing tool to help districts and schools estimate their funding needs and revenues for specific services.

---

**Essentials for Community School Transformation**

Supporting Meaningful Learning Through Performance Assessment

Developing and evaluating complex skills for success in our rapidly changing society

To succeed in today’s complex world, young people must be able to think critically and creatively, solve novel problems, use ever-changing technologies, and continue to learn. While many schools are seeking to change curriculum and instruction to foster these 21st century skills, tests in the United States have not evolved at the same pace, mostly still measuring lower-level skills through multiple choice questions.

Partnering With States to Develop Performance Assessment Systems

LPI has been working with states, districts, and universities that are seeking to design and use performance assessments that allow students to demonstrate their knowledge in authentic ways: by developing analyses, solutions, and products; conducting investigations; and demonstrating and explaining their work. Like the behind-the-wheel driving test that states require, these performance assessments reflect abilities in action and support meaningful learning.

Through the State Performance Assessment Learning Community (SPA-LC), conducted in partnership with the Council of Chief State School Officers, LPI has helped 30 states—from Massachusetts to Washington and from Wisconsin to Utah—develop assessment designs and policies to expand high-quality performance assessment systems. LPI’s support for the California Performance Assessment Collaborative has enabled educators, policymakers, and researchers to analyze, strengthen, and advance authentic assessments, including schools and districts implementing graduation portfolios and capstone projects that engage students more fully in their learning and prepare them more deeply for college and careers.

30 States working together to develop more meaningful assessments through the State Performance Assessment Learning Community, organized by LPI
Students in my state are experiencing assessments that actually contribute in meaningful ways to their learning and confidence, and we would never have been able to do that without [the State Performance Assessment Learning Community].

— State education agency leader

Connecting High School Performance Assessments and College Admissions

To support the ability of colleges and universities to use authentic work to better know applicants’ abilities and to narrow inequities, LPI has convened the Reimagining College Access (RCA) initiative, which brings together college admission officers, high school counselors, and other partners. RCA supports K–12 leaders in examining the quality of their performance-based assessment systems and helps higher education admissions staff incorporate performance assessments in their admission processes. LPI-sponsored research has demonstrated the value of these assessments both in strengthening high school education and college admissions and in supporting greater diversity in admissions in ways that also enable college success. LPI’s key partner, the National Association for College Admission Counseling, now convenes RCA’s many members as LPI continues to support research and policy initiatives.
Research indicates that high-quality teachers have more impact on student learning gains than any other in-school factor. And yet, a 2022 analysis found that teacher shortages were so severe that almost 200,000 teaching positions were vacant or staffed by underqualified teachers—most of them in schools serving high proportions of students of color and in low-income communities. Since then, teacher attrition has escalated further due to increasingly challenging working conditions, the stresses of teaching in a pandemic, inadequate supports, and poor salaries. Teacher shortages are of particular concern in the wake of the pandemic, when students need a stable team of highly skilled teachers to cope with the trauma of COVID-19 and learning recovery needs.

Spurring Action on Shortages
In 2016, LPI was first to publish a comprehensive analysis on the emerging teacher shortage that galvanized national attention to the problem. Since then, we have continued as a leading voice in helping policymakers and practitioners enact evidence-based policies to strengthen the teaching profession. LPI’s national and state analyses of shortages offer long-term solutions to recruit, prepare, develop, and retain a high-quality, diverse teacher workforce. Through these analyses, congressional testimony, and work with legislators and executive branch leaders, LPI has informed the federal government’s increased investments in teacher preparation and support since 2021.

Supporting States to Develop a Diverse, Stable Teaching Force
In California, LPI’s annual analyses of the educator workforce have informed the state’s more than $1.4 billion investment in teacher recruitment and preparation since 2016, including more than $600 million for teacher residencies and $500 million for service scholarships. Early data suggest that these investments are increasing the number of fully prepared teachers entering the profession while increasing the diversity of California’s workforce: More than 50% of newly credentialled teaching positions across the country that were vacant or held by underqualified teachers

199,000

When states respond to shortages by reducing standards rather than increasing salaries and improving working conditions, what they’re doing is creating a vicious cycle [of teacher shortages].”

— Linda Darling-Hammond, quoted by CNN

graduates in 2021 were teachers of color. Many other states—including New Mexico, Pennsylvania, Texas, Washington, and West Virginia—have drawn on LPI research as they too are developing policies to strengthen preparation, diversify the workforce, and address teacher shortages.

**Serving as a Trusted Source**

LPI is a trusted source for insights on data and solutions: LPI researchers have contributed to hundreds of articles on teacher shortages and the teaching profession in news outlets from ABC News, CNN, and NPR to the *Los Angeles Times*, *New York Times*, and *Washington Post*. LPI’s timely blogs on solving teacher shortages continue to make our wide body of research on recruitment and retention issues accessible to the public and responsive to the needs of policymakers.

**Preparing and Retaining a Diverse, High-Quality Educator Workforce**

Recruiting teachers without investing in their training exacerbates the cycle of shortages, since underprepared teachers leave at more than twice the rate of those who are well prepared. Investing in high-retention pathways to teaching, high-quality preparation, and supportive working conditions is essential to ensuring all students have a diverse, stable, well-prepared set of teachers to support their learning.
Well-prepared teachers significantly improve students’ outcomes, and they also leave the profession at lower rates than those who are underprepared, thus creating a more stable and effective teaching force. Well-prepared school leaders support both greater teacher retention and student achievement, especially for historically underserved student groups. This preparation enables educators to engage in developmentally appropriate, culturally responsive practices that support the whole child and enhance educational equity.

Yet far too many educators do not have access to the high-quality preparation they need and deserve, and those who work in high-poverty schools have fewer opportunities to learn. To address critical issues of teacher and school leader preparation, LPI is working with partners both to understand and develop stronger programs and to catalyze systemic policy changes at the institutional, state, and federal levels that make this kind of preparation more widely available and accessible to all educators.

**Studying Best Practice and Redesigning Preparation**

LPI began by documenting the practices of leading-edge programs as they prepare both teachers and principals. To scale up best practices across the country, LPI and the Bank Street College of Education organized EdPrepLab—a national network of pioneering teacher and leader preparation institutions focused on promoting practices that support deeper learning and equity. By sharing research and practice, creating opportunities for deep partnerships among its members, and sharing insights with programs nationally, EdPrepLab has supported institutions in analyzing and redesigning their programs based on the science of learning and development, work that will expand soon thanks to the $2 million Yidan Prize awarded to EdPrepLab. Meanwhile,

### 3,300

the increase in the annual number of fully prepared teachers after California’s investments in residencies and service scholarships

*Source: Educating Teachers in California: What Matters for Teacher Preparedness? (2023).*
LPI’s recent synthesis of research on effective principal development has catalyzed reforms of leader preparation programs by professional associations of school leaders both in the United States and in Brazil, where the report has been translated into Portuguese.

LPI also convenes the Teacher Licensure Collaborative, a network of more than a dozen states and eight national partners working to incorporate advances in the science of learning and development into teacher licensure and program approval standards. The network has informed changes in licensure rules, preparation policy, and implementation in states such as Minnesota, Ohio, Pennsylvania, Washington, and West Virginia.

**Informing Investments in Quality Preparation and Educator Diversity**
LPI’s research has informed substantial state and federal investments in the educator workforce, including resources for residency programs that recruit a diverse workforce of candidates who are exceptionally well prepared and who stay in teaching; for service scholarships and forgivable loans that underwrite preparation and make it affordable for more teachers, especially those from minoritized communities; and for preparation programs in minority-serving institutions. LPI’s efforts were key in gaining support for the federal August F. Hawkins Centers of Excellence Program, which supports teacher preparation programs at historically Black colleges and universities, tribal colleges and universities, and minority serving institutions. The program was funded for the first time in fiscal year 2022 and garnered increased funding in fiscal year 2023. These institutions play a critical role in preparing teachers of color, preparing nearly 40% of Black teachers, for example.
The United States has one of the most inequitably funded education systems in the industrialized world—school funding based largely on local property taxes results in the highest-spending districts having nearly 10 times more funding for each student than the lowest-spending districts. Although states try to offset inequalities in district wealth, persistent funding gaps have sparked equity lawsuits in more than 40 states.

Identifying and Developing Effective State Funding Policies
LPI works with states to identify the impacts of inequitable school funding, along with promising solutions based on research documenting the positive effects of equitable and well-spent funding on student outcomes. In addition to deep-dive work informing equity-oriented reforms in California, New Mexico, and North Carolina, LPI partners with the National Conference of State Legislatures on the Education Finance Fellowship, a cohort of legislators and legislative staff from 22 states who have come together to build their knowledge of school finance research and policy and to share policy strategies to address school funding inequities, opportunity gaps, and other pressing issues in their states.

Addressing the Needs of Underserved Students
To address gaps in learning opportunities for underserved students, LPI has analyzed federal civil rights data to elevate disparities in student access to certified and experienced teachers, opportunities for advanced mathematics and science courses, and experiences of exclusionary discipline. Our research also explores how education systems can meet the needs of students in foster care, students living in deep poverty, and students experiencing

5 million
children living in deep poverty in the United States

The inspiration that I have personally felt from reading such a thorough report is necessary for this work and deeply appreciated. [LPI’s] work is tangible in supporting students who experience homelessness.

— Tara Turrentine, Coordinator for Education of Homeless Children, Sacramento County Office of Education, on Students Experiencing Homelessness: The Conditions and Outcomes of Homelessness Among California Students

homelessness. This work is informing states and districts as they seek evidence-based ways to use funding to support these students, including the $800 million in the American Rescue Plan Act for addressing the educational needs of students experiencing homelessness nationally.

Fostering More Inclusive Schools
Because inequitable school funding and concentrated segregation by race and income are deeply tied to persistent gaps in student opportunities and outcomes, LPI works to elevate the voices of scholars on issues of educational opportunity and equity and inform policies supporting greater integration in schools and communities. On the federal level, LPI’s work has informed the repeal of a 1972 anti-busing provision, increased funding for the Magnet Schools Assistance Program while informing evidence-based grant priorities that foster greater access to high-quality learning opportunities for previously excluded students, and helped develop the new Fostering Diverse Schools program as part of ESEA Title IV-A.

Interns and Postdoctoral Research Fellows

LPI helps foster the next generation of education researchers and policy experts through paid internships and postdoctoral fellowships that provide college students, recent graduates, and postdoctoral students opportunities to enhance their research and policy skills through hands-on project work supported by mentoring and networking experiences.

Since the internship program launched in 2016, LPI has had 72 alumni carrying their work forward in congressional offices, at research centers, as educators, at national education organizations, and in education-related doctoral programs. Our postdoctoral fellowship program began in 2021 with funding support from the Spencer Foundation. Many of our interns and fellows note that their experience at LPI has shaped their commitments and career plans.

“During my LPI internship, I was stunned by the deep expertise, knowledge, and experience of my colleagues. At the same time, the team was extremely supportive and inclusive. As a result, I gained a very solid foundation in education policy that has served me well in graduate school.”

William Berry, Doctoral Candidate in Education Policy at George Washington University and Research Associate, WestEd

“LPI provided meaningful opportunities to gain relevant technical skills and explore current education policy research. I found each project exciting and complementary to the topics discussed in my graduate studies. The internship solidified my interest in evidence-based research for education policymaking.”

Iris Hinh, Policy Analyst, Center on Budget and Policy Priorities
“LPI introduced me to my passion for educator preparation policy and gave me countless opportunities to make meaningful contributions to the team’s federal policy work. My internship served as a springboard into my career in education policy in DC.”

Zach Curtis, Government Relations Manager, Association for Career and Technical Education

“The internship experience gave me the opportunity to grow as both a researcher and writer, and I am incredibly thankful for all of the brilliant, caring people that I was able to connect with and collaborate with during my time there.”

Desiree O’Neal, Urban Education Policy PhD Student and Research Assistant, University of Southern California’s Rossier School of Education

“As a postdoctoral research fellow at LPI, I drew from my background in the learning sciences to explore the role of relationship-building and student voice in the design of equitable schools. My experience at LPI taught me how to develop successful partnerships with community organizations and expanded my research sensibilities in ways that prepared me for my current position as a policy researcher at the John Gardner Center for Youth and Their Communities.”

Eddie Rivero, Research Associate, John Gardner Center for Youth and Their Communities, Stanford University
